1. Introduction

This document is targeted for customers to understand the differences between A7670、SIM7070 and A7672. Users can use A7670、SIM7070 or A7672 series module to design and develop applications quickly.

A7670 series include A7670C, A7670E, A7670SA, A7670C-LNSC, A7670C-LAAE, A7670C-LAAL and A7670C-LAAS.

SIM7070 series include SIM7070G, SIM7070E, SIM7070G-MN and SIM7070G-M.

A7672 series include A7672E, A7672S and A7672SA.

1.1. Module Overview

The A7670 series module supports LTE-TDD/LTE-FDD/EDGE/GPRS/GSM. SIM7070 series module supports LTE-FDD/EDGE/GPRS/GSM.

A7672 series module supports LTE-TDD/LTE-FDD/EDGE/GPRS/GSM. Users can choose different types of modules according to their needs to meet diversified market demands.

Table 1: Module basic information comparison

Modules	Renderings	Package	Size	Description
A7670X		88 LGA pins	24*24*2.5 mm	LTE CAT-1 and 2G
SIM7070X		68 LCC pins	24*24*2.3 mm	LPWA Module
A7672X		80 LCC+44 LGA pins	24*24*2.4mm	LTE CAT-1 and 2G

1.2. Features

This chapter lists the function parameters of A7670、SIM7070 and A7672, the comparison is as follows:

Table 2: Module function comparison

Function	A7670 series	SIM7070 series	A7672 series
Power	Power supply range: 3.4V~4.2V Typical value: 3.8V	SIM7070G Power supply range: 3.0V~4.6V SIM7070E Power supply range: 3.2V~4.2V Typical value: 3.8V	Power supply range: 3.4V~4.2V Typical value: 3.8V
Peak current	2A	2A	2A
Sleep current	3mA(LTE-TDD)	4.6 mA (LTE-FDD)	3mA(LTE-TDD)
Frequency band	A7670C/A7670C-LNSC: GSM:DCS1800/EGSM900 LTE-FDD: 1/3/5/8 LTE-TDD:34/38/39/40/41 A7670E: GSM:DCS1800/EGSM900 LTE-FDD: 1/3/5/8/20 A7670SA: GSM:DCS1800/EGSM900/G SM850/ PCS1900 LTE-FDD: 1/2/3/4/5/7/8/28/66 A7670C-LAAE: GSM:DCS1800/EGSM900 LTE-FDD: 1/3/5/8 LTE-TDD:34/38/39/40/41 A7670C-LAAL/A7670C-LAA S: LTE-FDD: 1/3/5/8 LTE-TDD:34/38/39/40/41	SIM7070G: GSM:DCS1800/EGSM900/G SM850/ PCS1900 LTE-FDD:1/2/3/4/5/8/12/13/1 8/19/20/25/26/28/66/71/85 SIM7070E: GSM:DCS1800/EGSM900/G SM850/ PCS1900 LTE-FDD:1/2/3/4/5/8/12/13/1 8/19/20/25/26/28/31/66/85	A7672S: GSM:DCS1800/EGSM900 LTE-FDD: 1/3/5/8 LTE-TDD:34/38/39/40/41 A7672E: GSM:DCS1800/EGSM900 LTE-FDD: 1/3/5/7/8/20 A7672SA: GSM:DCS1800/EGSM900 LTE-FDD:1/2/3/4/5/7/8/28/66

2. Package Introduction

2.1 Pin Assignment Overview

The following figure shows the pin assignment of A7670X、SIM7070X and A7672X.

A7670C/E/SA/A7670C-LNSC VS A7670C-LAAE/LAAL/A7670C-LAAS VS SIM7070X VS A7672E/S/SA

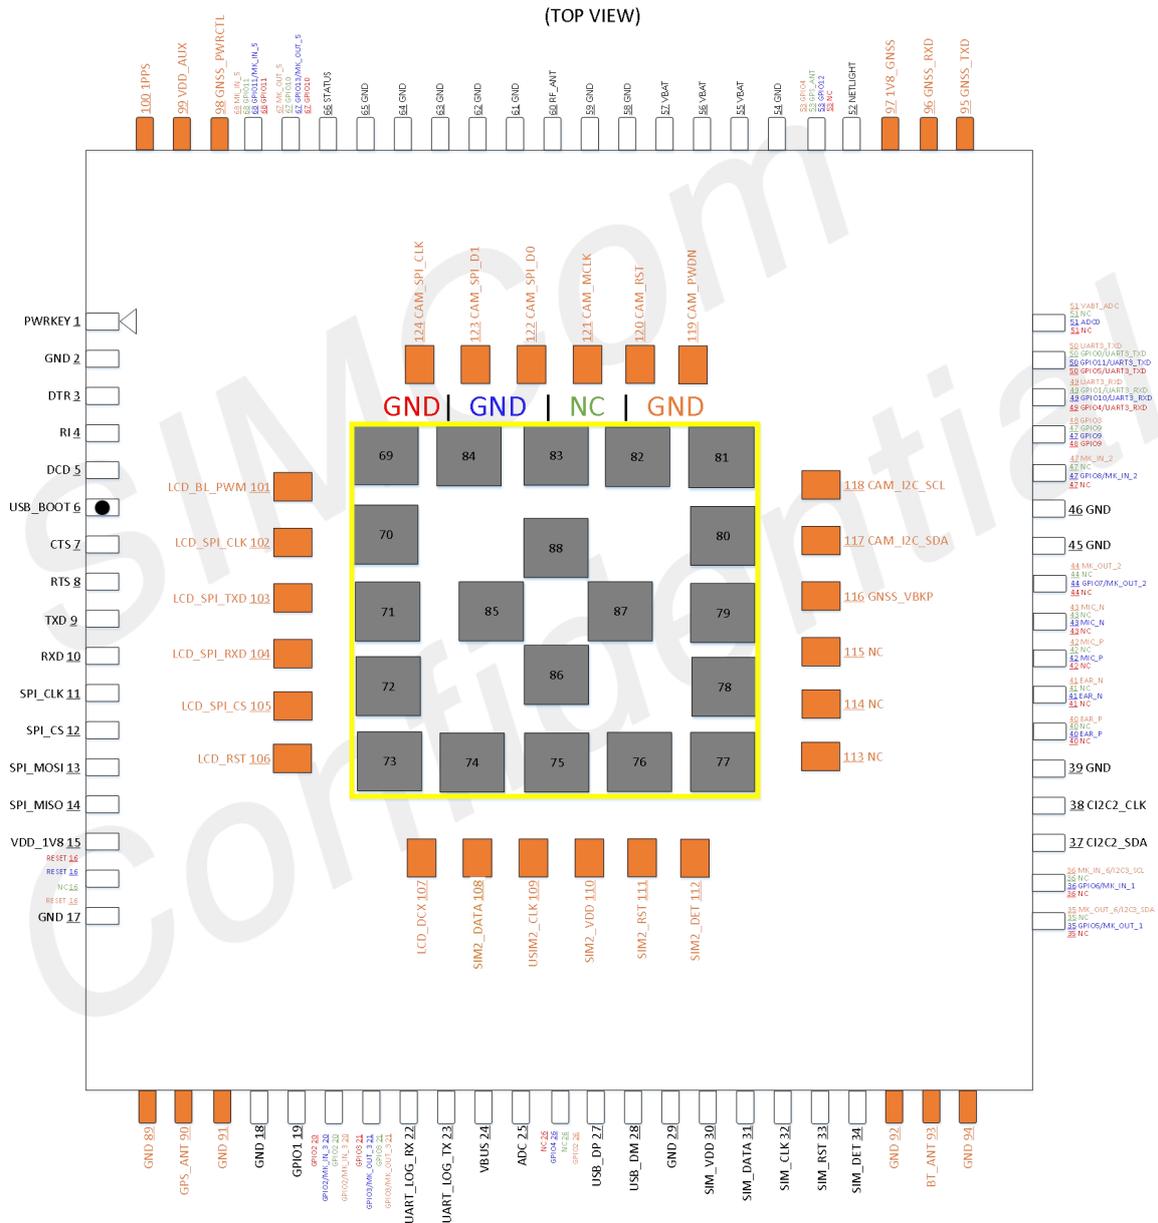

Figure 1: A7670X/SIM7070X/A7672X pin assignment (Top view)

2.2 PIN definition

This chapter describes the pin definition and comparison of A7670、SIM7070 and A7672 series. Table 3 provides the abbreviated definition of module pins:

Table 3: Pin type definition

abbreviation	description
Pin attributes	
PI	Power Input
PO	Power Output
AI	Analog Input
AO	Analog Output
I/O	Input or Output
DI	Digital Input
DO	Digital Output

Table 4 lists all pin names, IO types and power domains of A7670X、SIM7070X and A7672X.

Table 4: Module pin definition comparison

3. Physical Size

This chapter introduces the external dimensions of the A7670、SIM7070 and A7672 series modules, and the recommended packaging.

3.1 Top and Bottom View

The following figures show top and bottom view of A7670X、SIM7070X and A7672X.

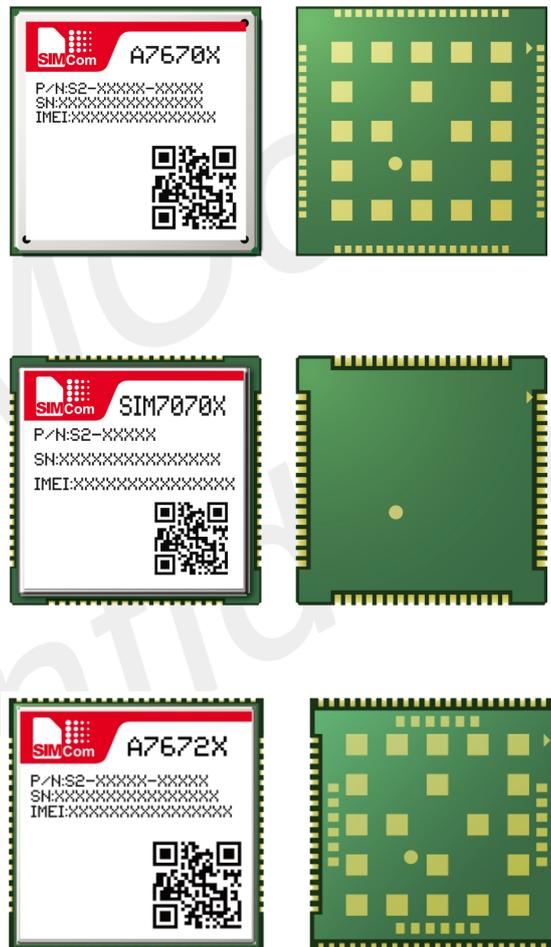

Figure 2: A7670X、SIM7070X、A7672X top and bottom view

NOTE

The above is the design effect drawing of the module for reference, and the actual appearance shall prevail in kind.

3.2 Recommended PCB footprint outline

A7670 and SIM7070 series have the same Recommended PCB footprint outline. A7672 series has a separate PCB footprint.

The recommended PCB footprint outline for A7670 and SIM7070 series is shown as below.

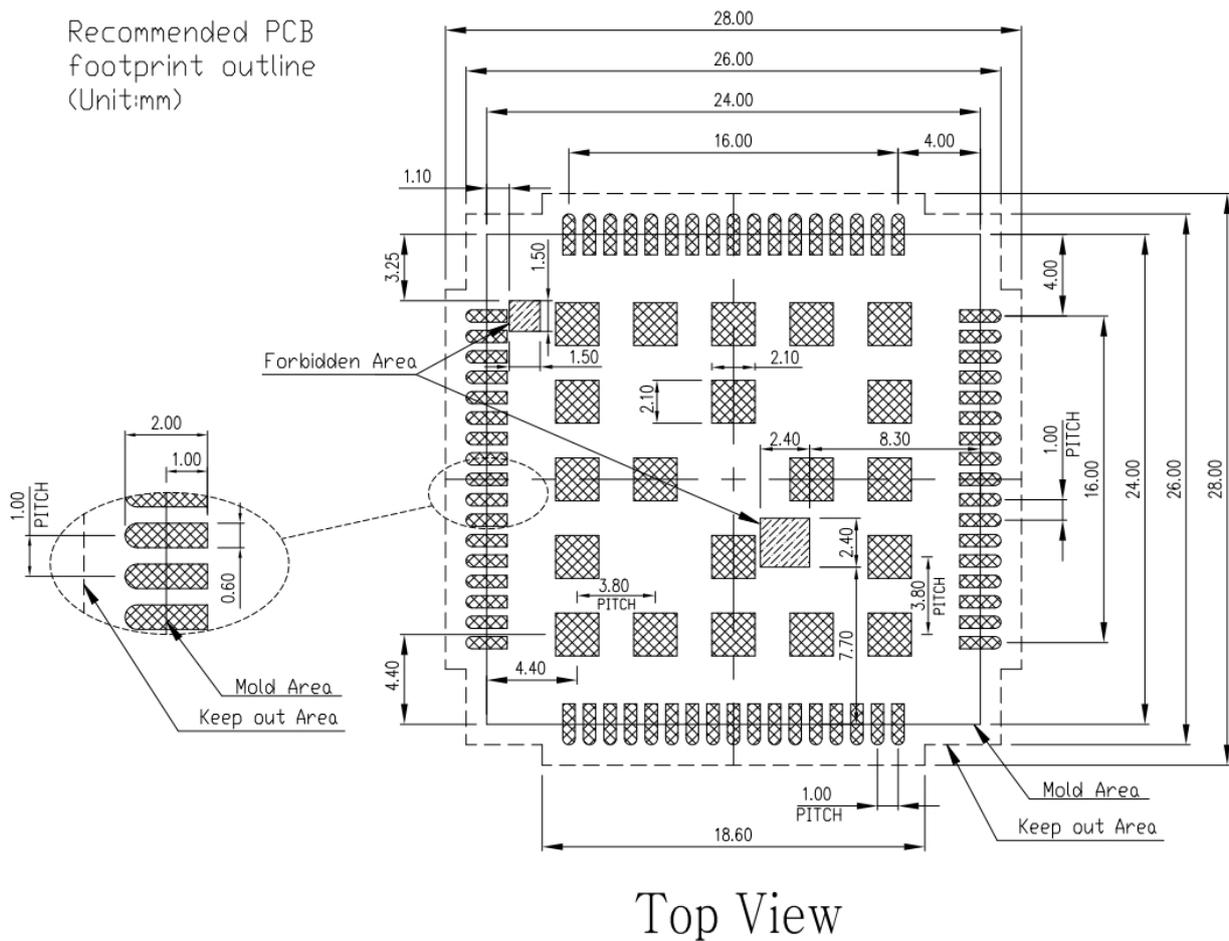

Figure 3: Recommended PCB footprint outline for A7670X and SIM7070X (Unit: mm)

The recommended PCB footprint outline for A7672 series is shown as below.

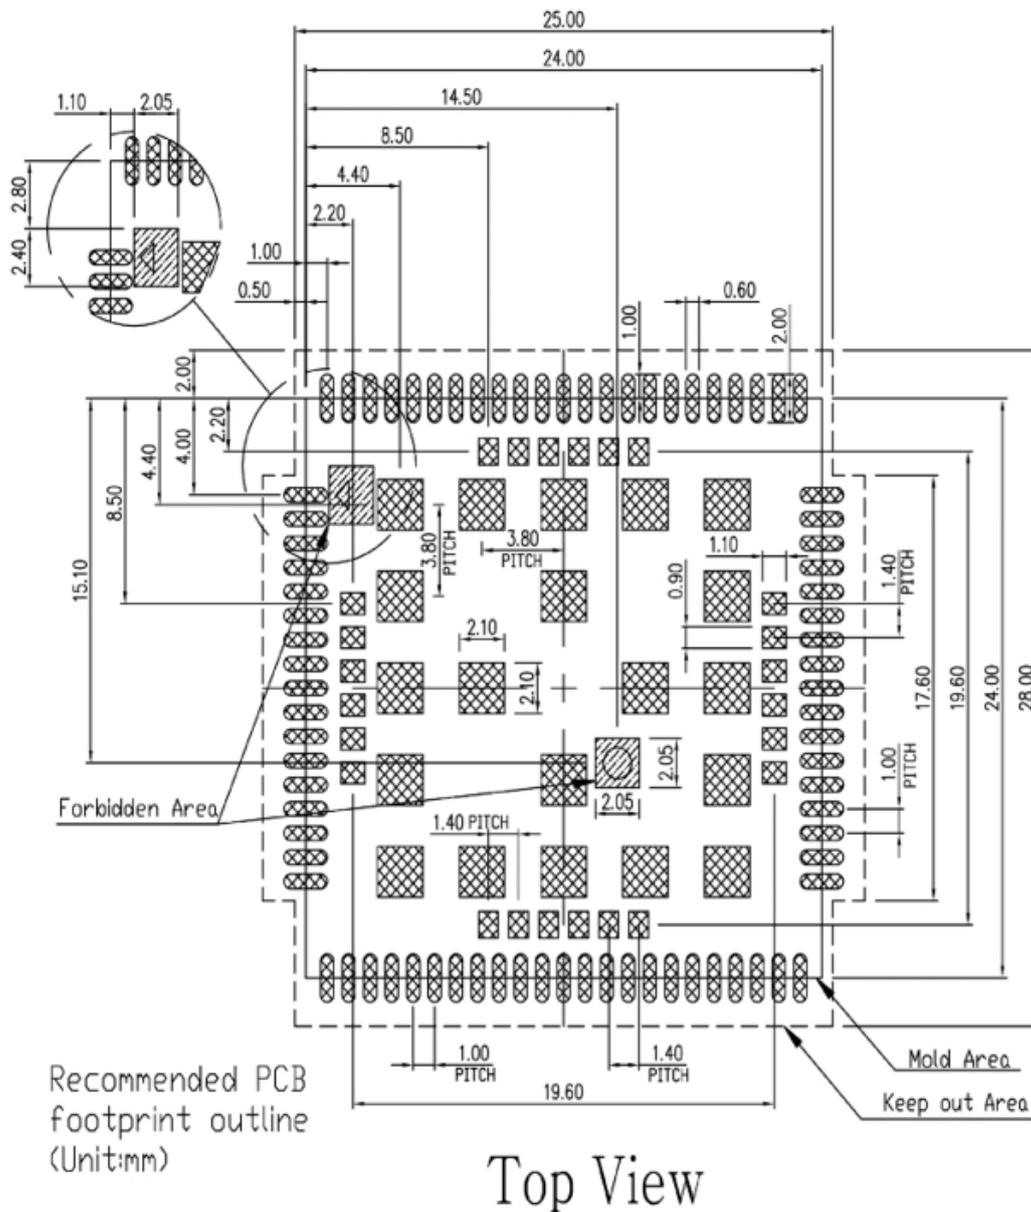

Figure 4: Recommended PCB footprint outline for A7672X (Unit: mm)

NOTE

For details information, please refer to each HD guide

4. Hardware Reference Design

Users using A7670、SIM7070 and A7672 user interface can refer to the design in this chapter.

4.1 Power Supply

4.1.1 Power requirements

The following table shows the supply voltage range of A7670、SIM7070 and A7672 series:

Table 5: Module recommended supply voltage comparison

Modules	Power Pin	Symbol description	Min	Typical	Max	unit
A7670 series	VBAT	Power supply range	3.4	3.8	4.2	V
A7672 series	VBAT	Power supply range	3.4	3.8	4.2	V
SIM7070G	VBAT	Power supply range	3	3.8	4.6	V
SIM7070E	VBAT	Power supply range	3.2	3.8	4.2	V

During 2G transmission, the instantaneous current is as high as 2A, and the battery terminal burst current and voltage drop model are shown in the figure below:

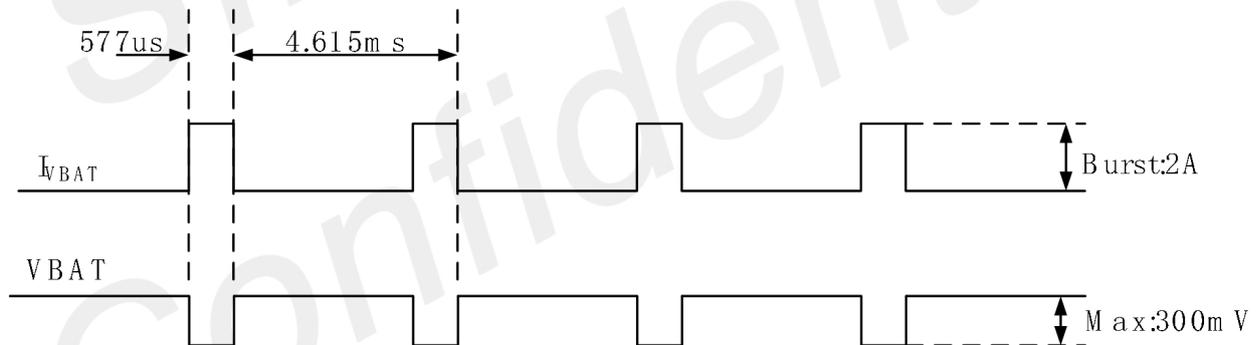

Figure 5: Burst transmission power requirements

In the user's design, special attention must be paid to the design of the power supply section to ensure that even when the current consumption of the module reaches 2A, the drop of VBAT does not fall below 3.4V. If the voltage drops below 3.4V, the RF performance of the module will be affected.

NOTE

When the power supply can provide a peak current of 2A, the total capacitance of the external power supply capacitor is recommended not to be less than 300uF; if it cannot provide a peak current of 2A, it is recommended that the total capacitance of the external capacitor is not less than 1000uF to ensure that the VBAT pin at any time The upper voltage drop does not exceed 300mV.

It is recommended to place four ceramic capacitors of 33pf/10pf/0.1/1 μ F close to VBAT to improve RF performance and system stability. At the same time, it is recommended that the width of the VBAT trace between the power supply on the PCB and the module is at least 3mm. The reference design recommendations are as follows:

If the VBAT input contains high frequency interference, it is recommended to add magnetic beads for filtering. The recommended models of magnetic beads are BLM21PG300SN1D and MPZ2012S221A.

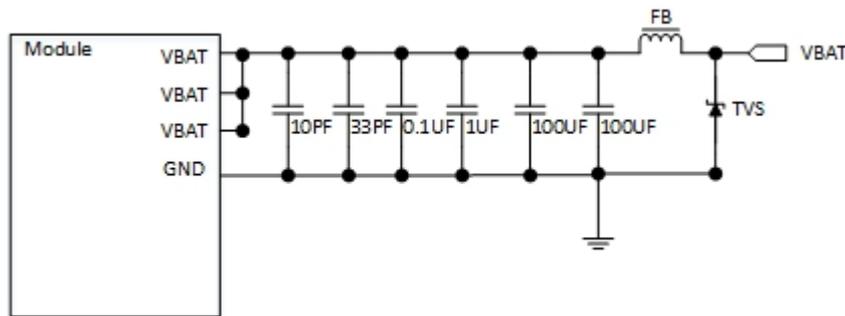

Figure 6: VBAT input reference circuit

4.1.2 Recommended external power circuit

The module power supply design is the basis for the stable performance of the module. When choosing a power supply, it is necessary to ensure that it has a load capacity of at least 3A. Users can choose LDO or DC-DC power supply according to their needs.

The recommended circuit of linear power supply is shown in the figure below:

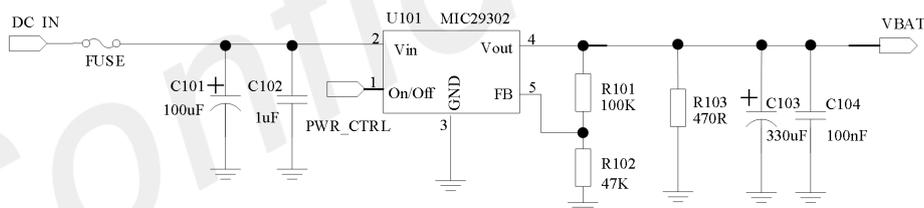

Figure 7: Linear power supply recommended circuit

The recommended circuit of switching power supply is shown in the figure below:

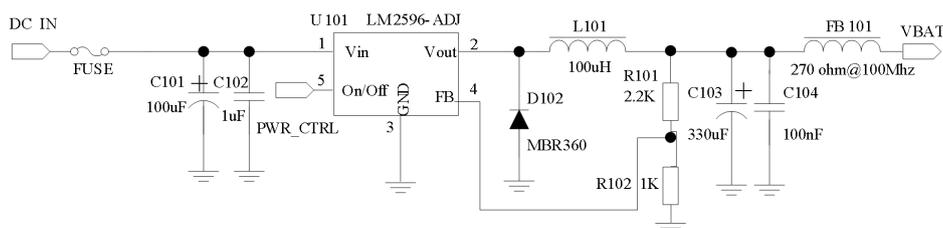

Figure 8: Recommended circuit for switching power supply

4.2 USB Interface

Both A7670 and SIM7070 series module provide a USB2.0 interface, supporting high-speed 480Mbps and full-speed mode 12Mbps, and do not support USB charging function; A7670 series does not support USB HOST mode.

USB is the main debugging port and software upgrade interface. It is recommended that customers reserve USB test points during design. If the main control chip is connected, 0R resistors should be reserved for switching external test points during design, as shown in the figure below.

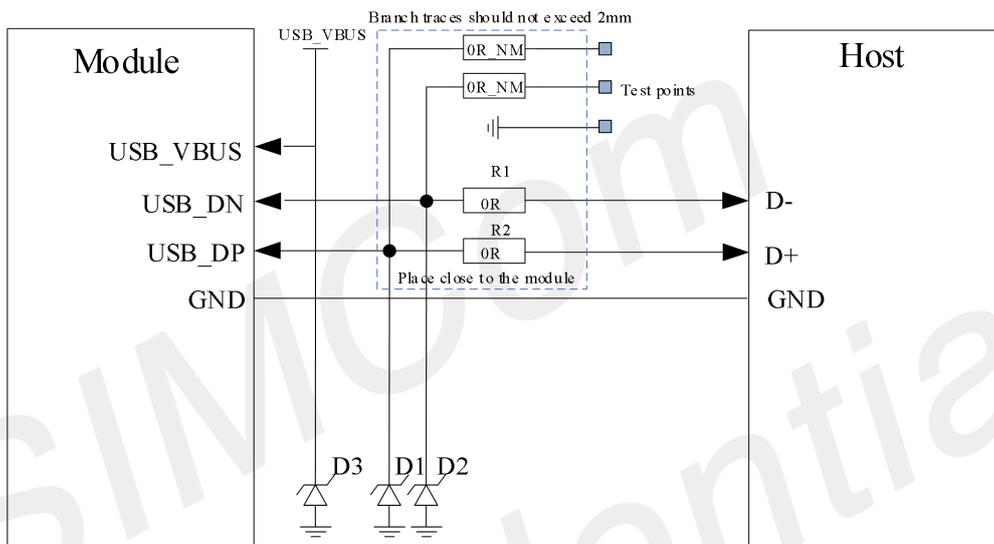

Figure 9: USB reference circuit

Customers can replace R1 and R2 with a common mode inductor to prevent EMI interference, and pay attention to the selection of D3 devices. It is recommended to choose anti-static and anti-surge two-in-one devices, and one TVS tube can be placed. Recommended model ESD5681N07. D+/D- trace impedance is controlled according to 90Ω and covered with ground; D1/D2 select TVS tube with capacitance value $<1\text{pf}$.

4.3 Network Status Indication

The NETLIGHT/STATUS pins can be used to drive a network status indicator LED. The following circuit is the reference design.

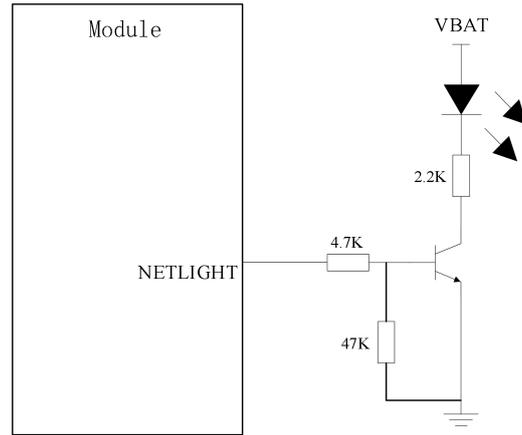

Figure 10: NETLIGHT/STATUS reference circuit

4.4 Power on/off Circuit

A7670、SIM7070 and A7672 series can be turned on by driving the PWRKEY pin to a low level for a certain time. It is recommended use an open drain or collector driver to control the PWRKEY. A reference circuit is shown below.

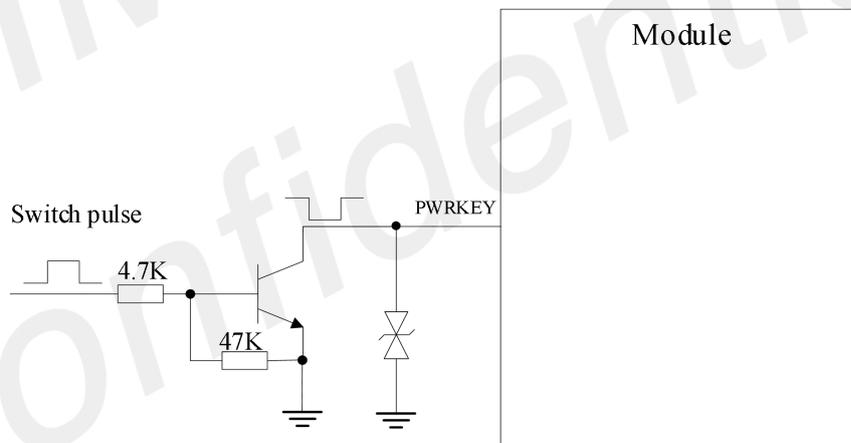

Figure 11: Power on/off reference circuit

The module has the following shutdown methods:

- Use PWRKEY pin to shut down
- Use "AT+CPOF" command to shut down
- High/low voltage overvoltage shutdown, use "AT+CPMVT" (A7670 series) to set the voltage range.
- Shutdown at high and low temperature

It is strongly recommended that customers use PWRKEY or AT+CPOF to shut down, and then power off VBAT after shutting down (especially when the module does not need to work at all). In addition, turning off the VBAT directly by disconnecting the VBAT may cause damage to the FLASH.

4.5 Reset Circuit

The A7670 and A7672 series reset circuit is as follows, the user resets the module by pulling down the RESET pin. The PWRKEY pin of SIM7070 series has its own reset function. The reset time defaults to 12S. When PWRKEY is pulled low, the module will reset the system after 12S. Therefore, it is not recommended to connect PWRKEY to GND directly or to GND through a 0R resistor when designing external circuits. The recommended (A7670 series) circuit is as follows:

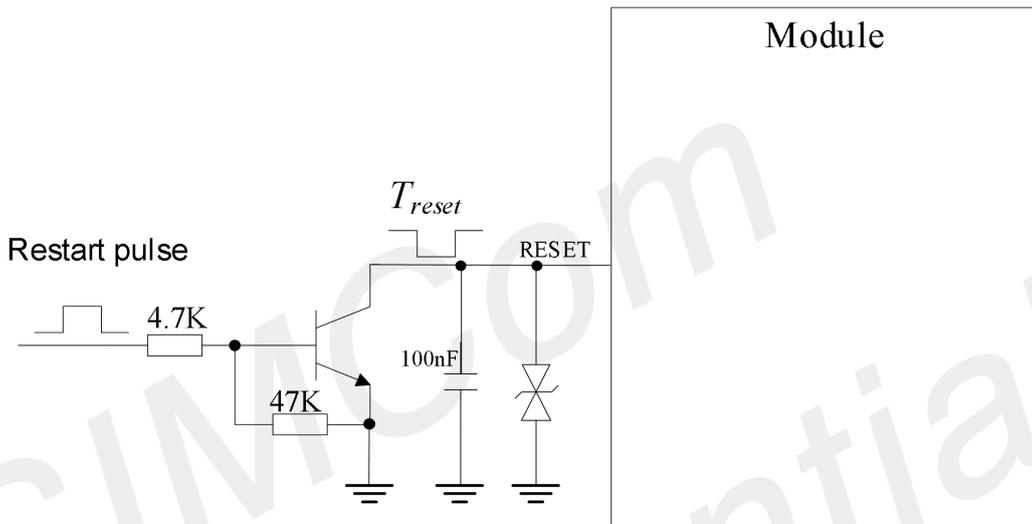

Figure 12: A7670X/A7672X reset reference circuit

4.6 USIM Interface

A7670 and A7672 series supports 1.8V/3.0V (U)SIM card by default and supports hot-swappable function; SIM7070 series only supports 1.8V (U)SIM card and does not support hot-swappable function. The recommended circuit is as follows:

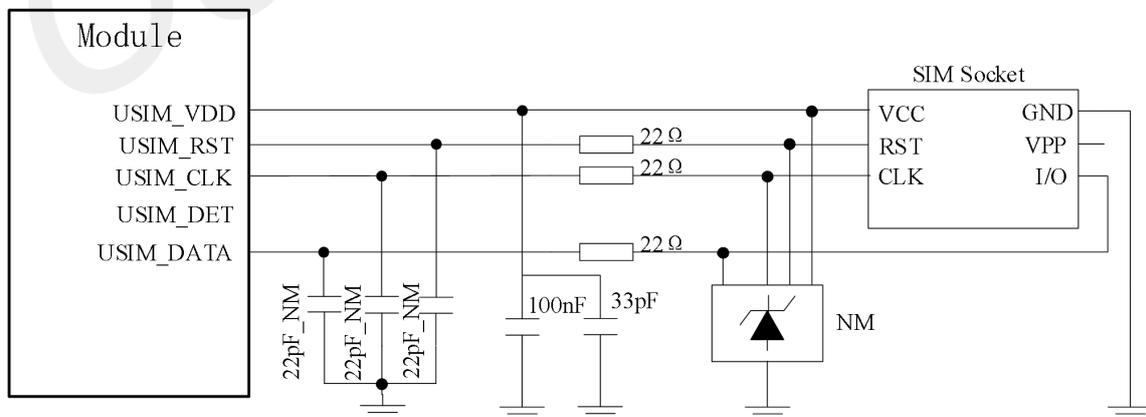

Figure 13: SIM interface reference circuit

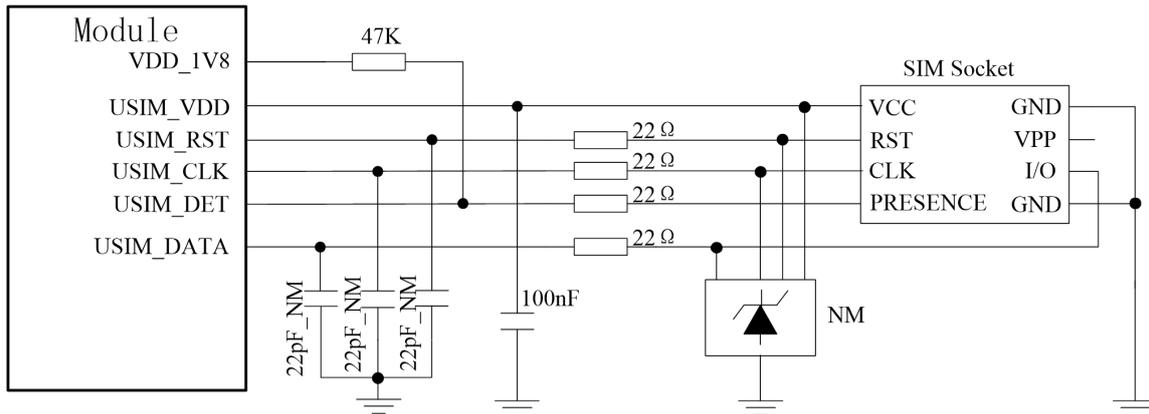

Figure 14: SIM interface reference circuit (8PIN)

NOTE

For details information, please refer to each HD guide

4.7 UART Interface

A7670 and A7672 series provides 3 serial ports, 1 main full-function communication serial port UART (RTS/CTS flow control function debugging), 1 ordinary two-wire serial port, 1 print LOG serial port, and the module is a DCE (Data Communication Equipment) device.

SIM7070 series can provide 3 serial ports, 1 full-function communication serial port, 1 2-wire serial port UART3, the default function after booting is GPIO; it can be configured as UART function, this UART cannot be used for AT command communication, only used for software two UART communication during the second development, this port can also be configured as a GNSS NMEA data output port. 1 DEBUG serial port, it will output the boot log during module startup. The default function after booting is GPIO, which can be configured as UART function. This UART cannot be used for AT command communication and is only used for UART communication during software secondary development.

Below are the reference circuits.

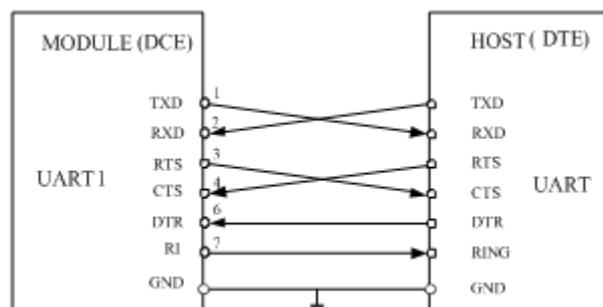

Figure 15: UART Full modem

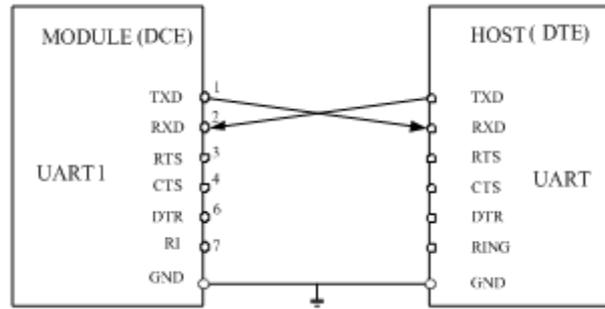

Figure 16: UART Null modem

The following figure shows the use of a transistor for circuit conversion. The circuit in the dotted line can refer to the circuit of the solid line TXD and RXD, and you need to pay attention to the direction of the signal. The recommended transistor model here is MMBT3904.

NOTE

For details information, please refer to each HD guide

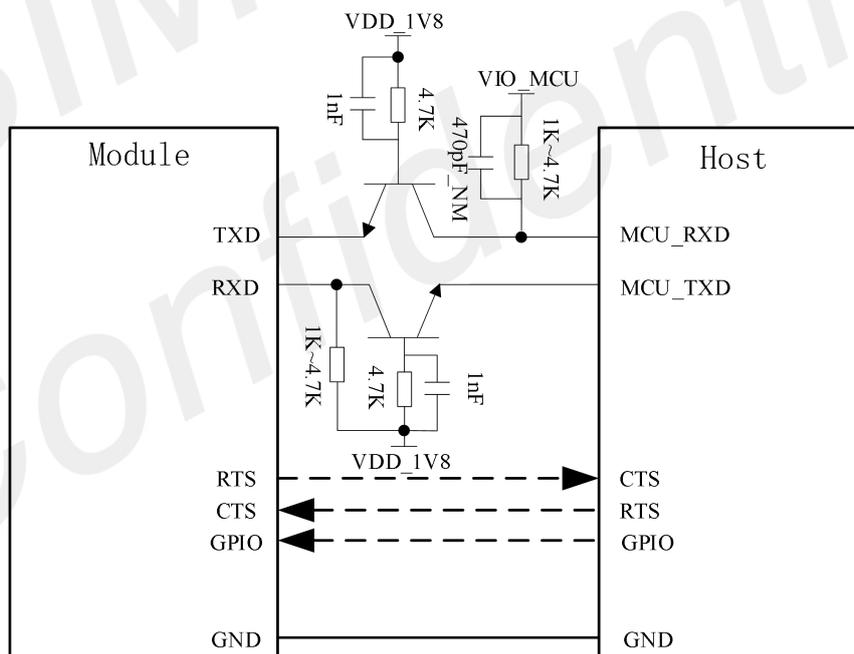

Figure 17: Triode level conversion circuit

NOTE

The VDD_1V8 (VDD_EXT) of each project in the diagram is different. For details information, please refer to each HD guide

4.8 PCM Interface

A7670、SIM7070 and A7672 series provide a set of PCM audio interfaces, which can be connected to an audio codec chip. Support voice function, customers can plug-in codec on PCM to make voice calls.

The following circuit is the reference design.

Table 6: PCM interface parameters

Function	A7670 series	SIM7070 series	A7672 series
PCM Interface	● Support 16-bit linear encoding format	● Support 16-bit linear encoding format	● Support 16-bit linear encoding format
	● Support short frame mode	● Support short frame mode	● Support short frame mode
	● Support main mode	● Support main mode	● Support main mode
	● Support 16K sampling rate	● Support 16K sampling rate	● Support 16K sampling rate

The recommended circuit of PCM is as follows:

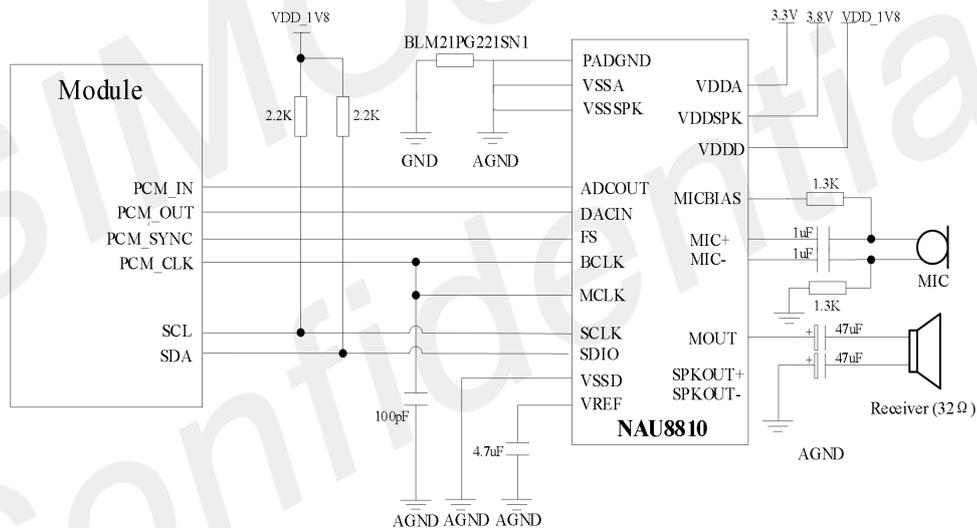

Figure 18: PCM recommended circuit

Codec supports the model number NAU8810. The audio output MOUT and SPKOUT can be switched by AT command.

NOTE

For details information, please refer to each HD guide

4.9 RF Interface

The reference circuit of ANT_MAIN antenna connection for A7670、SIM7070 and A7672 series is shown in the figure below. In order to ensure the best performance of the output radio frequency, it is recommended to reserve a π -type matching circuit, and the capacitor is not attached by default.

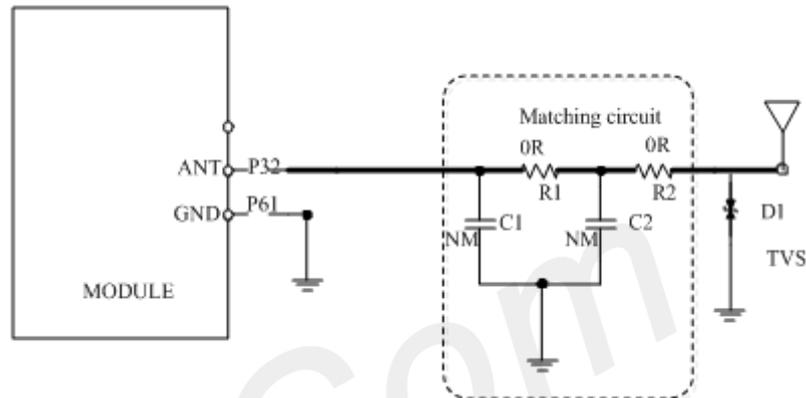

Figure 19: Antenna matching circuit

The capacitors (C1/C2) are not mounted and a 0 Ω resistor is mounted on R1 and R2 by default. The component D1 is a TVS for ESD protection, and it is optional for users according to application environment. The RF test connector is used for the conducted RF performance test, and should be placed as close as to the module's RF_ANT pin. Two TVS are recommended in the table below.

Table 7: Recommended TVS

Package	Part Number	Vender
0201	CE0201S05G01R	SOCAY
0402	PESD0402-03	PRISEMI

4.10 USB_BOOT Interface

A7670、SIM7070 and A7672 series support the USB mandatory download function.

User can pull up the USB_BOOT pin to 1.8V for A7670 and SIM7070, pull down USB_BOOT pin to GND for A7670 before powering on, then press the power button to enter the emergency download mode. At this time, the module can download software through the USB port.

The reference circuit is as follows. It is recommended that users connect these two signals to test points.

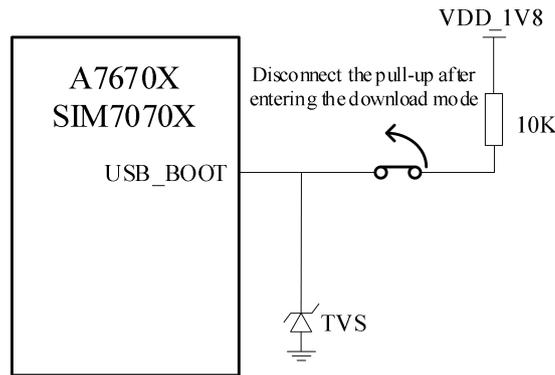

Figure 20: Forced download reference circuit for A7670X and SIM7070X

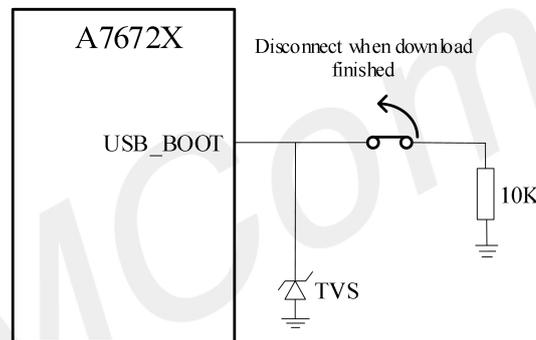

Figure 21: Forced download reference circuit for A7672X

4.11 ADC Interface

Both A7670C/E/SA/A7670C-LNSC and SIM7070 series provide 1 GPADC interface. A7670C-LAAE/LAAL/LAAS provide 2 GPADC interfaces. A7672X provide 1 GPADC and 1 VBAT_ADC. The electrical characteristics are compared as follows:

Table 8: ADC interface parameters

Function	A7670C/E/SA/LNSC	SIM7070X	A7670C-LAAE/LAAL/LAAS	A7672 series
ADC	1: ● GPADC	1: ● GPADC	2: ● GPADC	2: ● GPADC ● VBAT_ADC
ADC resolution	12bits	10bits	12bits	10bits
Voltage range	0~1.3V	0~1.875V	0~1.3V	GPADC: 0~1.8V VBAT_ADC : 3.0~4.2V
