## Product Description

The SIM7060G is Multi-Band LTE-FDD NB-IoT and GNSS module solution in a SMT type .

It has strong extension capability with rich interfaces including UART, GPIO,SPI,I2C etc. The module provides much flexibility and ease of integration for customer's application.

It is designed for applications that need low latency, Low throughput data communication in a variety of radio propagation conditions. Due to the unique combination of performance, security and flexibility, this module is ideally suited for M2M applications, such as metering, asset tracking, remote monitoring , E-health etc..

## Key Benefits

- With Power Save Mode(PSM) and Extended Discontinuous Reception(eDRX), SIM7060G can extend battery life to 10 years.
- SIM7060G provides deeper coverage enhancement compared to GSM.
- GNSS support:GPS&Beidou&GLONASS
- The package of SIM7060G is compatible with SIM7000x.
